

## Controller 2.0

Smart  
Reliable  
Accurate

HeartWare's next generation Controller 2.0 gives you more freedom, with up to 14 hours of power between battery changes. Yet, Controller 2.0 provides more than four hours of reserve power after you have been notified to perform a battery change.

**Enjoy more freedom – longer battery life broadens the possibilities on how you can spend your day!**

**HeartWare®**

## What you should know about your new controller.

### **Change your batteries less often**

Instead of hearing multiple alarms throughout the day, you may only hear alarms once a day (or not at all). You'll need to perform fewer battery exchanges daily—perhaps just once a day, for example before bedtime, when you plug the system into your continuous AC power supply.

### **Upgraded connections**

New metal connectors are designed to increase wear resistance for more reliable connections.

### **Natural connector orientation**

The power and driveline connectors are now oriented to 12 o'clock for a more natural connection.
